With InPlace Editor you can quickly and easily edit any part of page divided by headings. Sectional editing will save a plenty of your time and efforts.

Overview

InPlace Editor provides you with powerful capabilities to edit any page section in your Confluence. With this plug-in installed, you can forever solve one of the most discussed problems of Confluence - lack of **"sectional editing"** (CONF-5913 "Sectional Editing").

This plugin doesn't require any revision or preparation of your pages -- just install, turn it on for necessary spaces and let's rock! 🙂

Take advantage of Confluence InPlace Editor key features:

- **Quickly edit any section divided by headings**. While editing the whole page, you waste much time on scrolling up and down, this plug-in allows you to concentrate more on text editing rather than searching for the appropriate paragraph.
- **Enable plug-in only for certain spaces**. Do you want to enable plug-in only for particular spaces? It's possible, just in one click.
- **Any user can temporarily disable InPlace Editor**. It's useful if you are going to print, copy or take a screenshot of page, so no additional icons will be visible.
- **Simultaneously edit the same page with easy conflict resolution**. If another user edits the same fragment at the same time you have an opportunity to resolve this conflict with no problems.
- **Support of standard Confluence editor**. You needn't learn how to use any other editor, just edit the appropriate page parts with the standard visual editor.
- **Configure plug-in only for appropriate heading levels**. You can instantly select the appropriate heading levels, which the plug-in should be enabled for.
