Table Filter

Table Filter macro is a powerful macro that allows you to filter table data in page view and edit modes and manage the look of your table data on the page.

[Live Filtration] [Tips & Tricks] [Filtering with the Filtration Panel]

Live Filtration

To get started, try filtering table data on the fly in table headers. Hover over table columns and click the funnel icon in one of the headers:

Activity	Campaign type	Budget	Start	End	Target audience	Icon	Priority
Twitter	SOCIAL MEDIA	$600	1/1/2021	6/30/2021	Partners		LOW

Signage	OTHER	$500	1/1/2021	12/31/2021	Business		LOW

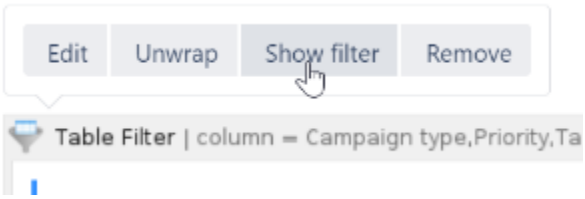
Tips & Tricks

1. Try additional functionality in the page view mode. Click the funnel icon at the top right corner of the table to reach the features:

- **Save changes** to preserve filtration after refreshing the page
- **Filter whole table** to apply text filter to the whole table at once
- **Hide columns** to hide unnecessary columns in the page view mode
- **Copy the filter URL** to share the link with the predefined filtration parameters with your teammates
- **Export to PDF, CSV, Word** to share already filtered table
- **Remove the macro** to unwrap your table in the page view mode

2. Click the equal sign to search for not equal values:

3. Switch to the editor, select the macro and click **Show filter** to use filtration while editing your table:



Filtering with the Filtration Panel

To learn more about displaying filters on a filtration panel or additional options of table viewing and try these features live, open any of these pages:
