

3 - Settings

What settings are available?

Enabling / disabling plug-in only for necessary spaces

Ask your administrator to do that if InPlace Editor should be disabled only for certain spaces and should work for the rest.
You can also enable plug-in for newly created spaces at once.

Enable InPlace Editor by space

<input checked="" type="checkbox"/>	Name	Key
<input checked="" type="checkbox"/>	Accounting	AC
<input checked="" type="checkbox"/>	Demonstration Space	ds
<input checked="" type="checkbox"/>	Dev Space	DVS
<input checked="" type="checkbox"/>	Documentation	DOC
<input checked="" type="checkbox"/>	Marketing	MAR
<input checked="" type="checkbox"/>	Technical Support	TS

InPlace Editor Settings

☒ Enabling InPlace Editor on new spaces

Working only with specified levels of headings

This option is available to Confluence administrator:

If you want to enable the plugin on new spaces manually you should disable this option

Show "Edit" link only for specified levels of headings

h1-h6

Save

Cancel

You can use this option when your pages contain a lot of low-level headings and you don't want to edit them as separate parts.

For example, on this Confluence instance only Headings 1-4 were configured as editable. Heading of this part is of 4th level and heading below is of 5th level. So when you click the EDIT icon above you will be able to edit two parts of text in the same window.

5th Level Heading - Only For Demo purposes

Notice that there is no EDIT icon near the heading above.
